How Rain Happens: Reading Comprehension

Nonfiction: Science · about 95 words

Read the passage. Then answer each question. Circle the best answer or write your answer on the lines.

💧 How Rain Happens

Have you ever wondered where rain comes from? It is part of the water cycle. First, the sun warms water in oceans, lakes, and rivers. Some of the water turns into a gas called water vapor. The vapor rises into the sky. This is called evaporation.

High in the sky, the air is cool. The vapor turns back into tiny drops of water. The drops gather to make clouds. When the drops get big and heavy, they fall as rain. The rain fills the rivers and oceans again, and the cycle starts over.

1. **Main idea:** What is this passage mostly about?

   A. why the ocean is salty B. how the water cycle makes rain C. how to stay dry

2. **Sequence:** What happens first in the water cycle?

   A. Clouds form. B. The sun warms water. C. Rain falls.

3. **Vocabulary:** Evaporation is when...

   A. rain falls down B. ice melts in your hand C. water turns into a gas and rises

4. **Detail:** What do tiny drops of water gather to make?

   A. rivers B. snowmen C. clouds

5. **Detail:** When does rain fall?

   A. only at night B. when the drops get big and heavy C. when the sun is hot

6. **Sequence:** What happens after rain fills the rivers and oceans?
