ANSWER KEY

Frog Life Cycle: Learn and Practice (answers)

From egg to tadpole to frog

Read each question. Circle the best answer.

1 🐸 Where do most frogs lay their eggs?

A. In desert sand **B. In water**

C. In snow D. In tree tops

Frog eggs need to stay wet, so most frogs lay them in ponds and wetlands.

2 A tadpole has back legs and still has a tail. What is happening?

A. It is changing into a frog

B. It is an adult C. It is laying eggs

D. It has just hatched

Growing legs is part of the big change from tadpole to frog.

3 A clump of frog eggs in a pond is called...

A. A hive B. A cocoon **C. Frogspawn**

D. A nest of twigs

Frogspawn is a jelly clump of many frog eggs floating in the water.

4 Which stage of a frog life cycle can lay new eggs?

A. Adult frog B. Egg C. Froglet

D. Tadpole

Only adult frogs can lay eggs, which starts the life cycle again.

5 What hatches from a frog egg?

A. A tadpole B. A frog with legs

C. A caterpillar D. A fish

A tadpole hatches first. It looks quite different from its parents!

6 How does a tadpole move around?

A. It hops on legs

B. It swims with its tail C. It flies

D. It crawls on land

A young tadpole has no legs, so it wiggles its tail to swim.

7 Young tadpoles breathe underwater using...

A. Their tail B. Their eyes

C. Only lungs **D. Gills**

Like fish, young tadpoles use gills to take oxygen from the water.

8 What is a froglet?

A. A frog egg B. A kind of fish

C. A fully grown frog

D. A young frog with a little tail

A froglet looks like a tiny frog but still has a short tail that will soon disappear.
