ANSWER KEY

Bird Migration: Learn and Practice (answers)

Long journeys that happen every year

Read each question. Circle the best answer.

1 Hummingbirds migrate too. Why do they eat a lot before the trip?

A. To grow new wings
B. To get heavy for fun
C. They need energy for the flight
D. To sleep on the way

Flying far takes lots of energy, so hummingbirds fuel up before they go.

2 Why do many birds migrate in autumn?

A. To find food and warmer weather
B. To get a new color C. To see friends
D. To lose feathers

Winter makes food hard to find, so many birds travel to warmer places with more food.

3 🐻 Some animals stay put and sleep through winter instead of migrating. This is called...

A. Evaporation **B. Hibernation**
C. Pollination D. Migration

Hibernation is a deep winter sleep. Bears and some bats do it instead of travelling.

4 🌷 When do most migrating birds come back to Canada?

A. Autumn **B. Spring** C. Midnight
D. Never

In spring, the weather warms and food returns, so birds come back to nest.

5 ⭐ How do many birds find their way when migrating?

A. They never travel
B. The Sun, stars and landmarks
C. Maps made by people
D. Asking other animals

Birds use the Sun by day, stars by night and landmarks like rivers and coasts. Clever navigators!

6 Which bird is famous for flying south in a V shape?

A. Chicken **B. Canada goose**
C. Ostrich D. Penguin

Canada geese fly in a V shape. Penguins and ostriches cannot fly.

7 What is migration?

A. A long trip animals make each year
B. A kind of nest C. Changing color
D. Sleeping all winter

Migration is a long journey that animals make at about the same time each year.

8 🍂 In autumn, many birds in Canada fly...

A. Underground **B. South**
C. To the Moon D. Into the ocean

Many birds fly south in autumn, where winters are warmer and food is easier to find.
