ANSWER KEY

Babies Like Parents: Learn and Practice (answers)

How are young like their parents?

Read each question. Circle the best answer.

1 How is a puppy different from its mother?

A. It is smaller B. It has no legs

C. It has scales D. It has wings

Young animals are usually smaller. They grow bigger as they get older.

2 🐱 A baby cat is called a kitten. What will a kitten grow up to be?

A. A fox B. A rabbit C. A dog **D. A cat**

Kittens grow into cats, just like their parents. Animals make young of their own kind.

3 🐶 How is a puppy like its mother dog?

A. Both can fly B. Both live in water

C. Both have feathers

D. Both have fur and four legs

A puppy has the same body parts as its mother, like fur, four legs and a tail.

4 🐸 A tadpole does not look like a frog. What happens as it grows?

A. It stays the same forever

B. It becomes a fish

C. It grows feathers

D. It grows legs and loses its tail

Tadpoles slowly change. They grow legs, lose their tails and become frogs like their parents.

5 Two puppies have the same parents. Will they look exactly alike?

A. Yes, and they will have wings

B. Yes, always exactly the same

C. No, one will be a cat

D. No, they can have different spots

Brothers and sisters are alike, but not exactly the same. Their spots or colors can differ.

6 🦆 What does a duckling grow up to be?

A. A chicken B. An owl C. A crow

D. A duck

A duckling is a baby duck. It grows into a duck like its parents.

7 🐴 Which baby looks most like its parent?

A. A tadpole and a frog

B. A caterpillar and a butterfly

C. A grub and a beetle

D. A foal and a horse

A foal is a baby horse. It has long legs, a mane and hooves, just like its mother.

8 🌻 A sunflower seed is planted. What will grow?

A. A rose **B. A sunflower** C. Grass

D. An apple tree

Seeds grow into the same kind of plant they came from.
